Tagging the difficult to tag in retail and beyond

AD Miniweb M780 FCC inlays from Avery Dennison are designed for global retail, industry, and supply-chain applications. They excel in minimum footprint and top performance on difficult-to-tag and low-detuning materials such as cardboard and plastic, and in other demanding, close-coupling environments.

Equipped with an M780 IC from Impinj, AD Miniweb FCC M780 features 496-bit EPC memory and 128-bit user memory. The IC is compatible with the global GS1 UHF Gen2v2 standard and features a privacy mode that enables loss prevention and protects consumer privacy.

Available in dry, wet, and paper tag delivery formats, AD Miniweb FCC M780 inlays have a compact size 45 x 18 mm which can be easily converted for end-application usage, and make the product suitable for the applications where the space is limited but still large data needs to be store inside tag.

Like all RFID products from Avery Dennison, AD Miniweb FCC M780 inlays are manufactured according to the industry's highest quality standards, as confirmed by the RFID Lab at Auburn University: The inspection body awarded Avery Dennison its first comprehensive and significant ARC accreditation for quality. AD Miniweb FCC M780 has passed ARC category F, G, M,N,Q, W2, W5, W6, requirements in FCC frequency band.
